Script Video One: Welcome

Meet the protagonists of this story.

Theodor – the citizen science's project coordinator.

Alice – a volunteer that wants to help the world and make it a better place

Yousuf – seasoned citizen scientist, that wants to joint another project

Nora – lawyer, who is a friend of Alice's

Those four will take you through the twists and turns of understanding the most important elements of your rights and obligations as citizen scientists.

The imaginary project we will put our protagonists is a study to follow up the clinical complication of recovered Covid-19 patients. It is a collaborative effort in several countries that is supported by public and private companies, including a large multinational pharmaceutical giant.

The citizen scientists are asked to collect and later help in assessing and analyzing data from people who have recovered from the virus. The aim is to create a pathway for treatment with medications for the most common long-term effects.

Theodor – the coordinator for the citizens science project has posted online a short call for volunteers. Both Alice and Yousuf came forward and were welcomed as valuable citizen scientist.

This short module will follow their story.
